

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

divided into Minutes and halves, which will be so magnified by the Eye Glafs, that it will be eafy to diftinguifh the time to a few feconds.

I muft confeß there is fome difficulty in fixing up this Inftrument, and when it is fo, to keep it from varying from its true pofition, yet 'tis not infuperable ; but for fmall inftruments of about 2 or 3 foot long, there cannot be, I think, a more accurate, facile, and expeditious way than this for the drawing a Meridian Line. Now whether the many benefits that may accrue to Aftronomy, do not make the larger one worthy of the charge and trouble that there may be in compleating it, I fhall leave, Sir, to yours and the reft of the Illuftrious Society's confideration ; to whole fervice I am moft humbly devoted.

Stephen Gray.

*VI. A Letter from Dr Martin Lifter, F. R. S.
to Dr Tancred Robinson, F. R. S. concerning
pouder'd Blues paffing the lacteal Veins, &c.
Leatherhead, May 2. 1701.*

WHen I was the other day in Town, I was fhewn by you a moft ingenious little Tract of Fevers : which I read over with delight. I confeß, for want of Mathematicks, I could not well enter into fome of his reasonings. However, in the main, as far as I could be judge, he is much in the right, that moft, if not all Fevers proceed from the obftruction of the Glands.

But the occafion of my writing this Letter to you, is the paragraph I met with page 54 of that Book : in which an experiment of mine (very many years ago publifh_t,

light, and in the success of which I thought my self very happy) is not fairly represented : as, I suppose, standing too much in his way ; and therefore is removed, and passed over by him, as if not done by me, or at best mistaken. However, my good fortune is, to have had it afterwards experimented at *Oxford* by *Dr Musgrave* with a surprizing success ; viz. that a Dog kept long fasting, would not only admit into the Lacteals a tinctured liquor, but a very substantial one, such as powder'd Blue.

And therefore to account for Fevers, and the obstruction of the Glands, we must admit of crude, and otherwise vitiated Chyle, as well, if not oftner, than the external accidents from a cold and heat, and the disorderly temperature of the air.

I was ever greatly averse to criticize, being the unmannerly (not to say worse) vice of the age ; I am content every one should enjoy his own sense in the interpretation of Nature : but in this I could not but do my self justice ; the manner and success of the experiment being so fully and circumstantially delivered by me and *Dr Musgrave*.

The Transactions are single Tracts, and have been very uncertainly publisht, so as this Gentleman might not have seen some of the former, or forgot the passages relating to this experiment : That which makes me believe he hath not read them all, is that p. 10. he hath assigned the ordinary quantity of blood in a humane body to be 20 pound, according to that groundless and most extravagant guess of *Dr Lower* : Whereas if he had perused them all, he would have found a most certain proof by *Dr Molins*, that the blood of all animals is but as 1 to 20 of their weight : and therefore that of man, at a medium or ordinarily, not to exceed 8 pound. I am

S I R,

Your most humble Servant,

Martin Lister.
